# Containers

A container packages up code and its dependencies so the application runs quickly and reliably from one computing environment to another.

## Run a Sample Container

Try running a container: Copy and paste this command into your terminal and then come back

```
docker run -d -p 80:80 docker/getting-started
```

Explore more in the Docker Docs

## Guides

### Redis

An open-source in-memory key-value store that functions as a data structure server.

Run

### NGINX

An open-source web server, reverse proxy, load balancer and HTTP cache.

Run

### PostgreSQL

An open-source object-relational transactional AGD-compliant SQL database.

Run
